

Sagun Devkota

Django Backend Developer

Pokhara, Nepal | (+977) 9863795161 | sagundevkota07@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Python/Django backend engineer with 4+ years building logistics, SaaS, and document-processing systems. Specialized in async pipelines, distributed integrations, and high-volume data workflows using Django, Celery, PostgreSQL, and Redis.

SKILLS

Core: Django, Django REST Framework, Python, Celery, Django Channels, Django ORM, pytest-django

Databases & Caching: PostgreSQL, Redis, Elasticsearch, SQLAlchemy 2.0

Integrations & APIs: Stripe, OAuth 2.0, EDI/FTP, WebSockets, SSE, JWT, OpenAPI/Swagger, FastAPI, LangChain

AI / ML: Google Gemini, OpenAI, Anthropic Claude, Pinecone, RAG pipelines

Tooling: Git, Docker, Pytest

PROFESSIONAL EXPERIENCE

KaimakiWeb - Varese, Italy

2022 - Present

Python Django Developer

Logistics TMS System

- Designed and scaled a Django logistics backend processing ~400K shipment records with hourly updates (~5K+ changes/hour)
- Built a hash-based Change Data Capture (CDC) system on Celery + Redis, improving synchronization performance by 70%
- Developed a rule-based Django tariff engine supporting dynamic pricing across multiple brands
- Automated the Django-based invoice generation pipeline, reducing manual work by 40% and errors by 25%
- Designed a transactional invoice sequencing model guaranteeing gapless numbering under concurrent access
- Integrated DHL EDI/FTP workflows and SAT customs systems for automated shipment exchange and clearance
- Delivered real-time import/export progress via Django Channels WebSockets, eliminating polling from the React client
- Hardened ingestion pipelines with strict DRF schema validation across 70+ structured fields, preventing malformed records from reaching production systems

HSEGenius

- Engineered an async Django + Celery pipeline with an LLM-powered extraction layer (Google Gemini), processing Italian-language SDS documents and extracting GHS codes, CAS/CE/REACH identifiers, Seveso classifications, and ADR transport data
- Scaled extraction to run concurrently across multiple files using Celery + asyncio with a custom structured output schema for consistent field mapping
- Designed a real-time progress streaming system using SSE and Redis, giving users live per-file processing updates without WebSocket infrastructure
- Integrated Stripe for dual billing modes (recurring subscription and one-time credit purchases) with a custom DRF permission layer enforcing request limits before each processing batch
- Implemented Django multi-tenant RBAC (admin, employee, viewer, auditor) with JWT auth and subscription-gated API access across 30+ DRF endpoints documented via OpenAPI/Swagger
- Cross-referenced extracted CAS identifiers against ECHA databases to improve chemical compliance validation accuracy

Freelance Backend Developer (Upwork)

2022 - Present

- Rescued and refactored an abandoned Django codebase, restoring stability and delivering all remaining features for the client
- Architected a RAG pipeline with Pinecone, OpenAI embeddings, and multi-LLM routing (Anthropic/OpenAI), supporting PDF, DOCX, and Google Drive ingestion via LangChain
- Built an async REST API with FastAPI and SQLAlchemy 2.0, handling Slack webhooks, OAuth flows, and multi-tenant isolation across 30+ endpoints and 30 DB models
- Integrated Gmail, Google Drive, and Airtable APIs with async HTTP clients, OAuth token management, and idempotent sync pipelines
- Delivered Python integrations and automation solutions for clients across SaaS and data domains, maintaining a 5.0 rating across all contracts

EDUCATION

Pokhara University

2019 - 2024

B.E., Software Engineering | GPA: 3.76/4.0
